Orthodontics

Our principal dentist, Dr Peter Doyle has a special interest in orthodontics and to complement our family and cosmetic dental care, he offers a range of tooth straightening options. Peter is very keen on non extraction treatment and believes in encouraging the natural facial growth and development. This allows for the straightening of your teeth and results in a beautiful full face and smile without surgical extractions.

It's a good idea for children and young people to be seen at the optimum time, to harness the growth that is already taking place. Don't hesitate to make an appointment to get an opinion if you think your child might benefit from treatment.

Many of our patients today are adults. Thankfully, times have moved on from the days of big bulky braces and more and more adults are choosing to have their teeth straightened with more discreet, invisible braces. Tooth straightening can often be the first step in a smile makeover. Once your teeth have been aligned, they can be whitened and minimally reshaped too.

Every patient is different and that's why Dr Doyle offers an initial consultation. You will have time to ask questions and be given options for your treatment. The range of systems here means that you can choose the best option for you and your lifestyle.

Traditional fixed braces using the latest technology and modern brackets. We offer metal and white brackets.

Clear aligners which can be removed when eating and cleaning.

The Damon system works in very much the same way as traditional braces but with clear, more flexible brackets. The clear brackets and wires make them less visible.

Please make an appointment to find out what will work for you.
